

"From 1 March 2010 all taxpayers who use their personal vehicles for business will be required to complete a logbook separating business mileage from that of private mileage in order to claim travel expenses." - from SARS website. In other words if you do not log every trip you make you will not be able to claim for the business part of your travel allowance!

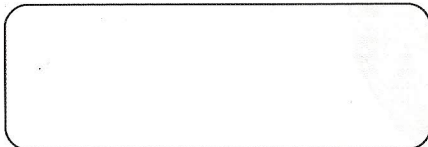

eLogger does exactly this! eLogger is a GPS Data logger with a dash mounted selection button, that you install in your vehicle. At the start of the trip you simply select business or private mode and the logger records the details of your trip. When your vehicle stops again eLogger automatically calculates the distance travelled and saves it. The travel data is stored on the unit, ready for download onto a PC when needed.

eLogger is a simple and very effective solution to keep an accurate logbook with the minimum user input. It is the only device available that differentiates between business and private kilometers.

Key Features:

- ◆ Remote, single button interface to choose "business" or "private" option when travelling.
- ◆ Colour LED on remote interface indicates satellite linkage and travel mode selected.
- ◆ Onboard data storage capability of more than a year and on a removable SD card.
- ◆ Data download into editable Excel spreadsheet. Separate columns for date, time, distance travelled, private and business kilometres and end coordinates of your trip.
- ◆ Installation software for seamless data transfer onto your PC.
- ◆ DIY installation in under 5 minutes.
- ◆ Operating range 12VDc and 24VDc, suitable for any vehicle.

DEALER NUMBER

Available at a once-off cost of only R1895.00.
